

Desktop Daily Timer DDT

Product Overview

The Desktop Daily Timer is a high quality home automation timer device that is capable of transmitting and receiving digital commands and status over the existing powerlines. Designed as a table top plug-in unit, it will transmit standard UPB commands at specified times of the day or upon a press of a push-button. The DDT can be programmed to control single lights, groups of lights and trigger dramatic scenes containing 8 dimmers or load controls.

The DDT will store up to 4 individual timed events to occur daily. Each event may be programmed as an absolute time or relative to sunrise or sunset settings (based on your geographic location), and may have an offset of plus or minus 128 minutes. Each dimming device may be programmed to turn on at its own preset light level, ranging between 0% and 100%.

The DDT comes in a 120VAC plug-in table top black enclosure with five buttons on the top of the unit for instant control and programming. A 2-line LCD Monochrome display shows the day of the week, date, time and status of the 8 devices. The display is also used for initial configuration and programming.

The Desktop Daily Timer has a 10 year battery back-up and will automatically adjust for Daylight Saving Time. Multiple DDTs can be supported in one system if more than 4 events are needed.

The DDT is manually programmed so UPStart Setup Software is not necessary. Simple configurations using the buttons on the top allow the user to set the following parameters; Time of Day, Latitude/ Longitude, Network ID, 8 devices to the network, default on light levels, as well as, the 4 timers containing from one to eight units.

The Desktop Daily Timer is designed to be an integral part of a complete PulseWorx Lighting Control System. Like all PulseWorx devices, the DDT uses the patented UPB™ powerline communication technology (invented by PCS) to reliably communicate with any other UPB-compatible device(s) over the home's existing electrical wires. No new wires are necessary making PulseWorx perfect for retrofit situations. When initial configuration is complete, the DDT will automatically activate any group of lights (or virtually anything else that connects to AC power wiring) throughout the house simultaneously.

Controller Features

- **Manual Programming**
Create a network and add up to eight devices without UPStart
- **Timer Scene Control**
Store up to 4 on and off times with up to 8 devices per event
- **ON/OFF Override**
Buttons on the top allow direct control of each unit
- **Astronomical Time Clock**
Events can be activated at specific times or via sunrise or sunset(with offsets plus or minus 128 minutes)
- **Battery Back-up**
10-Year non-volatile memory
- **5 Year Warranty**
- **Easy Installation**
Just Plug it in
- **Perfect For Retrofit**
Transmits signals over existing power wiring so there is no need for expensive hard wiring.
- **Low Cost Home Automation**
UPB based products are a fraction of the expense of wireless RF and hard wired systems.
- **PCS Reputation**
The PCS reputation is unmatched in the Home Automation market representing superior quality, high reliability, and excellent customer service.
