

THE HAUK FACTOR

Security Lighting, Stage One

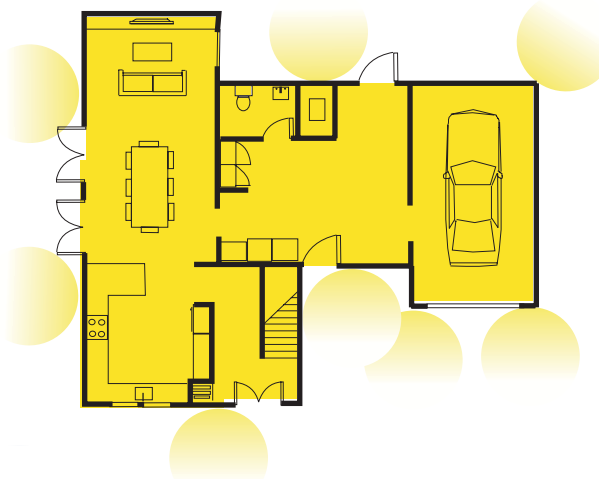

It's late at night, you hear a strange noise... what do you do...?

Reach over to your night stand and press the Panic button on your PulseWorx Desktop Keypad. The command is immediately transmitted to all the switches and lamp modules in your home. All the lights inside your home turn on and the outside lights begin to flash, alerting your family and the neighbors that there is a problem. Studies show that an external signal will help the police and fire department find the right home 45 seconds faster. In an emergency, this can be the difference between life and death.

When all is quiet and everyone is asleep, the house is dark...

You wake up to a strange noise or breaking glass! Chase away your fears with one touch!

Benefits

Convenience - In a Panic situation immediately turn on all the lights in your home.

Security - Scare off intruders before they enter your home and allow your CCTV cameras to see and record a better picture.

Safety - Obtain a positive ID, this keeps you from accidentally hurting a family member.

Pick Your Parts

KPCD - Desktop Keypad

(Tabletop Keypad Controller)
