FOR IMMEDIATE RELEASE

## Powerline Control Systems unveils TouchScreen

*PulseWorx™ UPB Lighting Controls now offer an elegant 3.6 inch TouchScreen Timer.*

Northridge, CA (June 10, 2008) – PCS (Powerline Control Systems, Inc.) the inventor of the ultra-reliable UPB Technology, is proud to announce the company's new TouchScreen Timer (Model TST) is now available. The TST TouchScreen Timer is a cost effective full featured color 3.6 inch touch panel controller which is designed to allow a user to control PulseWorx and other UPB devices by just plugging it into a PIM-R Powerline Interface.

The TouchScreen Timer will control up to 250 individual lights or trigger custom scenes and even regulate up to 99 scheduled events from one central place within 50 feet of an available electrical outlet. Room and Scene control is handled through this elegant wide viewing angle customizable ¼ VGA TFT touch-responsive LCD display over the existing power wiring.

The TST with exceptional brightness and high contrast is available in two versions, an elegant black table top version or a wall mountable unit which fits in a standard 2-gang electrical box.

"With the growth in touchscreen popularity and lighting control awareness, we felt that a touchscreen interface was needed at an extremely affordable price." said Scott Klodowski, Director of Sales and Marketing, "In essence the TST gives you a very customizable timer controller for less than \$750 to control PulseWorx™ lighting controls and other types of systems via UPB"

The TouchUP Graphical User Interface (GUI) Software allows management of Room, Module, Scene and Schedule buttons to create personal displays. TouchUP will create up to 99 schedules which will automatically control any UPB device or scene at pre-set times and/or days. Timed Events may be specified as absolute times or as times relative (plus or minus) to dusk or dawn. Importing existing UPStart configuration files into the TouchUP software, will save time, and keep naming consistent.

The PulseWorx product line is sold through a network of distributors, certified integrators and authorized dealers. For more information, visit [www.PulseWorx.com](http://www.PulseWorx.com) or call 888.701.9831.

### About PCS (Powerline Control Systems, Inc.)

Powerline Control Systems has been developing and manufacturing top-of-the-line lighting and electrical control devices for the residential and commercial markets since 1992. PCS provides a complete range of products under the PulseWorx™ brand, such as keypads, home controllers, dimmers, switches and custom-designed electrical control devices; powered by the UPB (Universal Powerline Bus) patented technology, the innovation of the PCS design team. UPB is answering the call for a lower cost, high reliability lighting control system to provide an alternative to expensive proprietary and hardwired systems.

PulseWorx™ devices work with existing powerlines in the home, making them perfect for existing home retrofit and remodel situations, as well as new construction. PCS has received numerous awards from both industry organizations and the media, including Product of the Year and CEPro magazine's Top 50 Editor's Pick.
