FOR RELEASE SEPTEMBER 1, 2009

Powerline Control Systems Can Teach You How to RAP

*PulseWorx Remote Access Port (RAP) Software Suite and Network Device Server
enables secure remote access of any RS-232 device*

Northridge, CA (September 1, 2009) – PCS (Powerline Control Systems, Inc.) the inventor of the ultra-reliable UPB Technology, is proud to announce the PulseWorx Remote Access Port (RAP) Software Suite and Network Device Server. This Ethernet-to-serial interface, (Model NDS-1111-PW) is now available and ready for immediate shipment.

PCS will be showing the RAP Software Suite and Network Device Server in Room C304 at CEDIA in Atlanta, GA September 10th-13th.

The RAP Software Suite is based on a host server/client topology which creates a virtual COM port on any computer to allow UPStart, or other software, a secure SSL communication path thru the Remote Access Port Server, to the deployed NDS-1111-PW's from anywhere an Internet connection is available.

The NDS is simple to install and configure. Connect it to our PIM-R or any serial device and plug it into an active network. You do not need to be an IT expert, know how to forward a port, or open up a firewall; configuration is all browser-based.

"Integrators are looking to be more profitable in these tough economic times. A 'virtual service' call can save hundreds of dollars in time, energy and gasoline." said Scott Klodowski, Director of Sales and Marketing, "We are delighted to offer an internet based recurring revenue solution which enables remote programming of PulseWorx Lighting Controls or any one of their other systems, without having to roll a truck!"

The PulseWorx product line is sold through a network of distributors, certified integrators and authorized dealers. For more information, visit http://www.pulseworx.com/NDS_.htm, email pxpr@pcslighting.com or call 888.701.9831.

About PCS (Powerline Control Systems, Inc.) Powerline Control Systems has been developing and manufacturing top-of-the-line lighting and electrical control devices for the residential and commercial markets since 1992. PCS provides a complete range of products under the PulseWorx™ brand, such as touchscreens, keypads, home controllers, dimmers, switches and custom-designed electrical control devices; powered by the UPB (Universal Powerline Bus) patented technology, the innovation of the PCS design team. UPB is answering the call for a lower cost, high reliability lighting control system to provide an alternative to expensive proprietary and hardwired systems.

PulseWorx™ devices use the existing powerlines in the home, making them perfect for existing home retrofit and remodel situations, as well as new construction. PCS has licensed its technology to other companies and received numerous awards from both industry organizations and the media, including Product of the Year, CEPro magazine's Top 50 Editor's Pick and MRA's Best No-New-Wires Technology.
