Powerline Control Systems Announces Upcoming Training Schedule

Lighting control manufacturer offers numerous PulseWorx certification courses in Q4 2011

Northridge, Cal. — September 22, 2011 — [Powerline Control Systems, Inc.](#) (PCS), the manufacturer of PulseWorx [lighting controls](#) for residential and light commercial applications, and the inventor of Universal Powerline Bus® (UPB®) technology, has announced its upcoming training schedule for the final quarter of 2011.

PCS will hold a series of "hands-on" interactive product training sessions and attend distributor shows throughout the U.S. which will demonstrate the inter-operational methodology of PulseWorx and Mi LightStyle, the lighting control solution that offers control via any Internet connected device (e.g. tablet, smartphone and computer). The curriculum equips integrators with the education and tools necessary to successfully and efficiently install PCS's award-winning PulseWorx® lighting control product line in retrofit and new construction applications.

"Powerline Control Systems is committed to giving custom integrators the right training and putting them in position to be successful out in the field," said Scott Klodowski, director of sales and marketing for PCS. "By attending these events, integrators will learn the inter-operation of PulseWorx and Mi LightStyle and get 'hands-on' applications of real-world scenarios to confidently apply these solutions to their clients' lives."

Installers also have an option to attend the [PCS Lighting Academy](#), which offers users an easy to use web portal where they can access the full training curriculum for Powerline Control Systems' PulseWorx lighting control products 24/7.

About Powerline Control Systems, Inc.

Powerline Control Systems has been developing, manufacturing top-of-the-line lighting, and electrical control devices for the residential and commercial markets since 1992. PCS provides a complete range of products under the PulseWorx® brand, including light switches, light dimmers, keypads, touchscreens, configuration software, and a variety of other electrical control devices; powered by the UPB® (Universal Powerline Bus) patented technology, the innovation of the PCS design team. UPB is answering the call for a lower cost, high reliability lighting control system to provide an alternative to expensive proprietary and hardwired systems.
